DETAILED ACTION

The Amendment filed on June 23, 2003 has been acknowledged.

Withdrawal of Allowability

1. The indicated allowability of claims 9, 12, 21, and 25 is withdrawn in view of the newly discovered reference(s) to Wojcik (US 6,250,736). Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States, only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 9 and 21 are rejected under 35 U.S.C. 102(e) as being anticipated by Garcia et al. (US 6,042,216).

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Garcia et al. discloses all the claimed features of the invention including:

- a method and system (via 230, Fig. 14's) for servicing an inkjet printer (Figs. 1, 16) including an inkjet printhead (106) with a nozzle plate (Fig. 4) and a first service module (wiper 234 or capper 236) removably installed on the printer (Fig. 23), comprising:
 - identifying a printhead-related service condition (Abstract, lines 3-6) not adequately addressed by servicing the printer with the first service module being in an un-worn condition (complete servicing includes other service module such as a capper, a spittoon, and primer connection, Abstract, lines 6-8);
 - providing a second service module (capper 236 or wiper 234) with a service function different from the first service module (Fig. 14a) and adapted to address said printhead-related service condition, the second service module removably installable on the printer and with respect to the first service module (Fig. 23);
 - providing the second service module to the printer user (234, 236 is available for use, Fig. 23), wherein the step of providing a set of instructions includes providing a set of human-readable instructions for using the second service module (column 6, line 61 -

Art Unit: 2863

column 7, line 7, column 8 line 7-18 provide human-readable instructions on how to use the second service module 234, 236).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 12 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Garcia et al. in view of Wojcik (US 6,250,736).

Garcia et al. does not disclose that the second service module includes a wiper fabricated of silicon, or a textile, or a special rubber for removing the ink accumulation.

Nevertheless, Wojcik discloses a wiper (26) fabricated of silicon or rubber for removing the ink accumulation (column 3, lines 5-11) for the purpose of providing a compliant and durable wiper.

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to provide Garcia et al. with a silicon or rubber wiper as disclosed by Wojcik for the purpose of providing a compliant and durable wiper.

Allowable Subject Matter

4. Claims 5-8, 14-16, 19, 20, 22, 27, and 30-32 are allowed.

Reasons For Allowance

5. The method or combination as claimed wherein removing the first service module from the printer and installing the second service module in the printer in place of the first service module (claim 5, 22, 30, 31) or providing a set of machine readable printer instruction code (claims 7, 19) or said printhead-related service condition includes ink on a printhead carriage interconnect, and the second service module includes a brush arranged to clean the interconnect (claims 14, 27) or the second service module includes a special capping structure having a range of movement along an axis generally transverse to a nozzle array of the printhead (claim 15) is not disclosed, suggested, or made obvious by the prior art of record.

Response to Arguments

6. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.
